

CASE STUDY

Meraki Cloud Solution - Office Move

The Challenge

ASSIA-INC, a Bay Area innovative technologies for service providers, needed a quick and easy solution for office move and at the same time, upgraded their current Cisco legacy equipment.

Our Solution

Accend was engaged to be part of their pre-planning stage for their upcoming office move. Accend assessed their current environment, including number of users, devices, new move location, and number of headcounts.

Accend came back with a proposed network architecture which included the Cisco Meraki MX84 firewalls, several MS-225 cloud switches, and half a dozen MR52 Access Points. Accend also created a heat map for the new wireless networks, assisted with the office move, and configured their new Headquarter network core switches, and integrated some of their existing network infrastructure switches in one weekend.

The Results

By Monday, ASSIA was back at the new office running with:

-  Complete Meraki Cloud Solution (MX84 Firewall, MS225 Switches, and MR52 Access Points).
-  Network Infrastructure was fully managed in the cloud and centrally through one management dashboard.
-  Office was in full operation.
